## Office Action Summary

Application No.

09/909,233

Applicant(s)

FOLEY ET AL.

Examiner

Gregory R. Del Cotto

Art Unit

1751

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on RCE filed 5/9/05.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1-8,10,12,14-19,22-29,33-35 and 41-44 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-8,10,12,14-19,22-29,33-35 and 41-44 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some \* c) ☐ None of:
- 1) ☒ Certified copies of the priority documents have been received.
  - 2) ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - 3) ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.

### Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: \_\_\_\_\_

### **DETAILED ACTION**

1. Claims 1-10, 12, 14-16, and 18-42 are pending. Claims 43 and 44 have been canceled. Applicant's arguments and amendments filed 5/9/05 have been entered. Claims 36-40 have been withdrawn from consideration as being drawn to a non-elected invention.

#### ***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 5/9/05 has been entered.

#### ***Priority***

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

#### **Objections/Rejections Withdrawn**

2. The following objections/rejections as set forth in the Office action mailed 2/24/05 have been withdrawn:

The rejection of claims 1-8, 10, 12, 14-19, 22-29, 33-35, and 41-44 under 35 U.S.C. 103(a) as being unpatentable over Trinh et al (6,194,362) has been withdrawn.

The rejection of claims 1-10, 12, 14-35, and 41-44 under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 34-38

Art Unit: 1751

of U.S. Patent No. 6,683,036 has been withdrawn due to the filing of a terminal disclaimer.

The rejection of claim 9 under 35 U.S.C. 103(a) as being unpatentable over Trinh et al (US 6,194,362) as applied to claims 1-8, 10, 12, 14-19, 22-29, 33-35, and 41-44, and further in view of Trinh et al (US 6,001,789) has been withdrawn.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000.

Art Unit: 1751

Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to

Art Unit: 1751

consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1-8, 10, 12, 14-29, 33-35, 41, and 42 are rejected under 35 U.S.C. 103(a) as obvious over Feng (US 5,929,007) in view of Trinh et al (US 6,194,362).

Feng teaches alkaline aqueous hard surface cleaning compositions which exhibit good cleaning efficacy against hardened dried or baked on greasy soil deposits. The compositions comprise 0.01 to 0.85% by weight of amine oxide, 0 to 1.5% by weight of chelating agent, 0.01% to 2.5% by weight of caustic, 3% to 9% by weight of glycol ether solvent system comprising one glycol ether or glycol ether acetate solvent having a solubility in water of not more than 20% by weight water and a second glycol ether or glycol ether acetate having a solubility of approximately 100% by weight wherein the ratio of the former to the latter is from 0.5:1 to 1.5:1, 0 to 5% by weight of a water-soluble amine containing organic compound, 0 to 2.5% by weight of a soil anti-redeposition agent, and 0 to 2.5% of optional constituents. See Abstract. The caustic agent is present in the compositions to ensure that the overall pH of the compositions is at least 11.5 or greater. Suitable solvents which exhibit a solubility in water of approximately 100% by weight include diethylene glycol n-butyl ether. See column 4, lines 20-65. The compositions preferably include a soil antiredeposition agents which may be synthetic hectorite, colloidal silica, etc. See column 5, lines 50-69. Another desirable additive is a thickening agent such as those based on alginates and gums including xanthan gum. See column 6, lines 5-40. Additionally, the compositions may contain optional constituents such as buffers, pH buffering agents, fragrances,

Art Unit: 1751

fragrance carriers, and adjuvants which increase their miscibility. See column 6, lines 30-40. Also, these compositions may desirably be provided as a ready to use product in a manually operated spray dispensing container. See column 8, lines 1-35.

Specifically, Feng teaches 2.0% amine oxide, 0.5% EDTA salt, 0.8% NaOH, 3.0% monoethanolamine, 3.0% glycol ether, low water soluble, 3.7% glycol ether, high water soluble, the balance water. See column 9, lines 35-50. The low water soluble glycol ether is propylene glycol n-butyl, the high water soluble glycol ether is dipropylene glycol methyl ether, etc.

Feng does not specifically teach the use of odor masking perfumes or a detergent composition containing a solvent, an odor masking perfume, and the other requisite components of the composition in the specific proportions as recited by the instant claims.

Trinh et al teach liquid aqueous, hard surface detergent compositions having improved cleaning and good filming/streaking characteristics comprising from about 0.0015 to about 3% of a blooming perfume composition comprising at least about 50% of blooming perfume ingredients selected from the group consisting of perfume ingredients having a boiling point of less than about 260 degrees Celsius; from about 0.001% to about 2% of a detergent surfactant; from about 0.5% to about 30% of a hydrophobic solvent, and the balance being an aqueous solvent system comprising water and a solvent such as methanol, ethanol, isopropanol, ethylene glycol, propylene glycol, glycol ethers, etc. See column 1, line 55 to column 2, line 30. Suitable perfumes include blooming perfume ingredients and extensive mixtures of perfumes, including

Art Unit: 1751

ionone, which encompass the blooming perfumes and ionones as recited by the instant claims. See column 6, line 10 to column 10, line 1.

Suitable glycol ethers include monopropylene glycol monopropyl ether, diethyleneglycolmonohexyl ether, monoethyleneglycol monobutyl ether, etc. See column 14, lines 54-65.

It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to use a mixture of perfume ingredients as recited by the instant claims in the composition as taught by Feng et al, with a reasonable expectation of success, because Trinh et al teach a similar hard surface cleaning composition containing such perfume ingredients and further, Feng et al teach the use of optional components including perfumes.

It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to formulate a cleaning composition containing a solvent, an odor masking perfume, and the other requisite components of the composition in the specific proportions as recited by the instant claims, with a reasonable expectation of success and similar results with respect to other disclosed components, because the broad teachings of Feng et al in combination with Trinh et al suggest cleaning composition containing a solvent, an odor masking perfume, and the other requisite components of the composition in the specific proportions as recited by the instant claims.

Note that, the Examiner asserts that the broad teachings of Feng et al in combination with Trinh et al would encompass compositions having the same pH, liquid surface tension, reserve alkalinity in the presence of acidic soils, and other physical

Art Unit: 1751

parameters as recited by the instant claims because Feng et al in combination with Trinh et al suggest compositions containing the same components in the same proportions as recited by the instant claims.

Claim 30 is rejected under 35 U.S.C. 103(a) as being unpatentable over Feng (US 5,929,007) in view of Trinh et al (US 6,194,362) as applied to claims 1-8, 10, 12, 14-29, 33-35, 41, and 42 above, and further in view of Ofosu-Asante (US 5,739,092).

Feng and Trinh et al are relied upon as set forth above. However, neither reference teach the use of a divalent cation in addition to the other requisite components of the composition as recited by instant claim 30.

Ofosu-Asante teaches liquid or gel dishwashing detergent compositions containing alkyl ethoxy carboxylate surfactant, calcium or magnesium ions, etc. See Abstract. The presence of calcium or magnesium ions improves the cleaning of greasy soils for compositions, manifest mildness to the skin, and provide good storage stability. See column 6, lines 40-55.

It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to use a magnesium or calcium ion(s) in the cleaning compositions taught by Feng, with a reasonable expectation of success, because Ofosu-Asante teaches the advantageous properties imparted to a similar hard surface cleaner when using magnesium and/or calcium ions.

Claim 31 and 32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Feng (US 5,929,007) in view of Trinh et al (US 6,194,362) as applied to claims 1-8, 10, 12, 14-29, 33-35, 41, and 42 above, and further in view of JP 8151597.

Art Unit: 1751

Feng and Trinh et al are relied upon as set forth above. However, neither reference teach the use of a smectite clay thickening agent in addition to the other requisite components of the composition as recited by instant claim 32.

'597 teaches liquid detergent compositions containing a clay mineral having an average particle size of 10 to 5000 nm and anionic and nonionic surfactants. These minerals include montmorillonite, saponite, smectite and swelling mica. See Abstract.

It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to use a smectite clay having a particle size of less than 100 nm in the cleaning composition taught by Feng, with a reasonable expectation of success, because '597 teaches the use of smectite clay having a particle size of less than 100 nm in a similar detergent composition and Feng teaches the use of thickening agents and mixtures of thickening agents in general.

Claims 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Feng (US 5,929,007) in view of Trinh et al (US 6,194,362) as applied to the rejected claims above, and further in view of Trinh et al (US 6,001,789).

Feng and Trinh et al are relied upon as set forth above. However, Feng or Trinh et al do not specifically teach the use of cyclodextrin in addition to the other requisite components of the composition as recited by the instant claims.

Trinh et al teach a cleaning composition in which a perfumes including ionones and musks are absorbed into a cyclodextrin carrier material to form complexes. See abstract and col. 7, line 35 to col. 12, line 55.

Art Unit: 1751

It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to use a perfume-cyclodextrin complex in the cleaning composition taught by Feng in combination with Trinh et al ('362), with a reasonable expectation of success, because Trinh et al ('789) teach the use of a perfume-cyclodextrin complex a similar cleaning composition and further, Feng in combination with Trinh et al teaches the use of perfumes in general which may be absorbed into a perfume containing carrier.

### ***Response to Arguments***

With respect to Feng et al and Trinh et al ('362), Applicant states that these two references are not properly combinable since the two documents teach away from each other. Applicant supports this contention by stating that Feng et al does not teach the use of anionic or cationic surfactant types while '362 requires surfactant, and preferably requires an anionic surfactant. In response, note that, '362 teaches the use of a surfactant which may be an anionic surfactant, amphoteric surfactant, zwitterionic surfactant, and mixtures thereof; '362 does not require the use of an anionic surfactant. Secondly, '362 is a secondary reference relied upon for its teaching perfumes, and more specifically, ionone perfumes. The Examiner maintains that there is clear motivation to one of ordinary skill in the to use perfumes (ionones) in the composition taught by Feng et al, with a reasonable expectation of success, because '362 teaches the use of ionones and other perfumes in a similar hard surface composition and further, Feng et al teach the use of perfumes in general.

***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Remaining references cited but not relied upon are considered to be cumulative to or less pertinent than those relied upon or discussed above.

Applicant is reminded that any evidence to be presented in accordance with 37 CFR 1.131 or 1.132 should be submitted before final rejection in order to be considered timely.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gregory R. Del Cotto whose telephone number is (571) 272-1312. The examiner can normally be reached on Mon. thru Fri. from 8:30 AM to 6:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Yogendra Gupta can be reached on (571) 272-1316. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
